

Information about Email and Google Apps for Education

Manitou Springs School District provides student access to Google Apps. Google Apps is a system that provides email and other Google products that will enable students to better communicate, share, and collaborate with their teachers and each other.

The use of Google Apps in the classroom will make it easier for students to access technology projects at home without the need of a USB key to transfer information, as the information is stored online in each individual student account. As we continue to be immersed in the digital age, more and more projects are using technology for construction and evaluation. Student access to documents, instructors, and other students is becoming more prevalent and the need to provide each student with these communication means is achieved by providing each student with a Google Account.

You will have access to your student's account by using the following information:

Go to the school [Google Apps Page](#)

Use the following information to log in:

User Name: first initial followed by middle initial followed by last name

Example: dlroth

Password: first name followed by the last four digits of their student number.

Example: david1235

Email address: [username@mssd14.org](#)

Example: [dlroth@mssd14.org](#)

Please take a few minutes and log on with your student to learn about some of the features of their new Google Apps account. There are a number of online resources that provide greater detail regarding each of the products associated with Google Apps. You can visit the Google Apps Help Center at <http://www.google.com/support/a/users> .
